Building World Class MIS Teams, for you!

CA611 is a cSAGE Certification Preparatory Course!

CA611 - AIX System Administration

Duration: 5 days

Audience: New AIX system administrators or administrators migrating from other UNIX systems to AIX.

Description: This course combines lectures and hands-on labs to teach the participant how to manage the AIX operating system. It includes information on basic system administration, as well as including topics that are AIX-specific that would be of interest to administrators coming from other platforms. The course may be customized to include topics associated with AIX on the SP platforms.

Prerequisites: A familiarity with using the UNIX operating system, including using vi, navigating file systems and using basic commands. This may be accomplished by taking an Introduction to AIX course, or having equivalent experience.

Topics:

- Introduction to System Administration
- System Management Tool (smit)
- Managing Devices
- System Startup/Shutdown
- File System Concepts
- The Journaled File System
- Backup and Restore
- Logical Volume Manager
- Managing Users and Groups
- AIX Queuing System
- Basic Problem Determination
